## IN THE LEGISLATURE

By H. G. HAMMELL, M.L.A.

The closing week of the Session of the Alberta Legislature was highlighted by discussion on two main bills, one an act respecting the rights of Alberta citizens, and the other a health bill.

The act respecting the rights of Alberta citizens is preambled by a list of undeniable facts. It points out that this country has fought two world wars for the declared purpose of assuring a better democratic society in which all people will receive a better share of the production and material resources of our country. One world war failed to win the peace, and the second one will do the same thing unless we organize our internal economy in such a way that the freedom and security for which men and women fought, may be experienced in reality by all of our citizens.

To do something about winning the peace is an obligation which every citizen owes to those who made the supreme sacrifice.

The preamble points out that this province possesses all the necessary human and material resources to guarantee our citizens material security and personal freedom. The B.N.A. Act charges the province with the responsibility of providing opportunities to enable the people of the province to realize and enjoy their property and civil rights. In order for the province to discharge this responsibility, certain basic rights and responsibilities of citizenship must be recognized. Alberta citizens must have access to the province's resources so that they can produce the necessary goods and services, and an equitable system of distribution must be inaugurated in order that all may realize a fair share from the efforts of the producers.

A province, to provide the opportunity for its citizens to develop and enjoy the resources of the province, must be in a position to control policy in respect to the issuing, use and withdrawal of credit.

This Alberta Bill of Rights is a sincere and earnest endeavor to translate into legislation and then into actual experience those principles which the great majority of Alberta citizens support. The preamble stresses certain definite, generally acceptable principles.

The rest of the bill is divided into two parts. The first part deals with the rights of citizenship. It outlines the principles which govern the rights and responsibilities of every citizen, including the right of religious worship; freedom of expression; freedom of citizens to associate; the right to engage in work of one's choice which may be available in the province. It stresses the necessity for an opportunity to engage in gainful employment. Only if gainful employment is not available is a citizen entitled to a social security pension. This applies particularly to those between the ages of nineteen and sixty. Those under nineteen are en-

titled to the necessities of life, educational and medical benefits. Those over sixty who wish to retire from gainful employment are entitled to a pension and medical benefits. The physically disabled are at all times entitled to a social security pension and medical benefits.

The second part of the bill deals with the issuing and transferring of credit entries. A court analysis will be sought, as well as a careful analysis by any and every provincial organization, and every citizen of the province. The government wants an expression of the people's views with respect to the provisions of this bill. The bill is a flexible one and the government is anxious that it be amended in any respect necessary to make it conform to the will of the people of the province.

In discussing the principles of the bill while it was before the House, Premier E. C. Manning asked the citizens of this province to answer for themselves three very important questions.

1. Have we in Alberta the physical resources and manpower to provide the essential necessary goods and services to our people?

2. Have we reached the stage where these proposals as outlined in this bill can properly be regarded as rights of citizenship?

3. If this is not the best answer to our problem of organizing a new order and a better society, then what is the answer?

At no place in the bill is there any question or suggestion of inflationary measures. There is a reference to supplementary buying power essential to moving goods when the total buying power in circulation within the province is below the total prices of goods. This supplementary buying power is to be distributed to the consumer; as this is the place in the cycle of business where it will do the most good. The legislation does not affect our importing or exporting as done today. Banks will still do business as usual. The reference to Courts of this bill is a sincere endeavor to settle definitely the question of constitutional jurisdiction. Unions of all kinds have fought for the rights outlined in this bill, professional groups have urged for these same things, and individuals in every walk of life have expressed the desire of the things. Today, through this bill all people have an opportunity of forgetting sectionalism and of uniting in this one common demand.

The bill makes no reference to making legal tender, creating currency, promissory notes or paper money. It merely asks for the transfer and expansion of credit, a thing which banks practice today but not under legal authorization from the Dominion Parliament. Honorable Lucien Maynard, Attorney General argued on the floor of the House that the province has the constitutional right to do those things outlined in the bill.

### BUTTER PRICES INCREASE 4 CENTS

Increase of four cents per pound in the price of creamery butter at all levels is designed as an incentive to greater butter production in the coming year, and also to bring creamery butter prices in line with other dairy products. Prices for dairy butter and whey butter remain unchanged.

### REDUCED SUBSIDY UPS PRICE MOLASSES

In line with the general policy of reducing subsidies where ever possible the Prices Board has announced a reduction of two-thirds of the subsidy now being paid on imported Bargados molasses. The result is an increase in consumer prices of four cents per quart.

## Isley Discusses Price Increases

Price adjustments announced by the Prices Board this week were described by Hon J. L. Isley in the House of Commons as "part and parcel of a carefully planned program that has been developing gradually since V-E Day". He said that the government does not contemplate an early lifting of the price control system and although price increases have been permitted "no serious rise in the cost of living is impending."

Mr. Isley said the price policy during the transition period is designed to give reasonable stability to living costs while creating conditions favorable to a high level of employment and production. The minister pointed out that adjustments above basic period prices are made when these prices are found to be "prejudicially affecting production and employment."

Removal of subsidies affected the prices of imported petroleum cotton and other goods. Mr. Isley declared that subsidies played a vital part in checking inflation during the war, but they are not desirable as a permanent feature of price structure and should be removed as expeditiously as possible.

The price increase of butter was made to stimulate production, and the price increase for pork products reflected the increased price paid by the United Kingdom for Canadian hogs.

Mr. Isley warned that the danger of inflation is still great and that the price control policy needed support if the "bankruptcy and unemployment resulting from a price boom followed by a price collapse are to be avoided."

## CHILD HAS NARROW ESCAPE

Gordon Shae, 2, youngest son of Douglas Shae grain buyer at Beiseker, narrowly escaped death this week when he broke through the cover of the cesspool behind the Shae residence. The child was rescued by his father who lowered himself into the cesspool.

The child was lifted out to safety with the aid of his mother.

## I.O.D.E. Hold Meeting

The Duke of York Chapter, I.O.D.E., held a regular meeting in the basement of Christ Church on Monday evening.

Mrs. Mackay, Regent, and Mrs. R. J. Shaw, Vice Regent, gave an interesting report on the provincial convention which they attended in Edmonton.

The local chapter is to proceed with suitable work for Britain especially for the children.

Considerable discussion regarding local work took place.

After the meeting a dainty lunch was served by Mrs. J. S. Cooper and Miss Lucy King honoring Mrs. Mackay who is leaving Carbon in the near future.

Watch for date of I.O.D.E. Tea.

## PRICES OF MEN'S SHIRTS UP 25 CENTS

To compensate manufacturers for the increased cost of fabrics as a result of the reduction of the cotton subsidy, the WPTB has announced increases in the selling price of men's and boy's shirts, pyjamas and flat cut underwear.

"The increase will in no case exceed twenty five cents and will generally be less" a Board spokesman stated.

## PULP AND PAPER PRICES ADJUSTED

Following examination of operating results in the pulp and paper industry an upward adjustment in price ceilings, averaging about seven percent at the producer level has been authorized by the Prices Board. With the exception of newsprint, no increases have been allowed in the industry since the inception of the price ceiling.

Price increases at the consumer level should be negligible although the new prices will assist in maintaining high levels of production for domestic and export markets.

## STOP! LOOK! LISTEN!

Carelessness of motorists, faulty visibility due to fogging of windshields and car windows resulting from frosty weather, and failure to heed the time honored signals "Stop. Look and Listen," continue to take their heavy toll in death and injuries.

This much is clearly evident from statistics compiled by the Board of Transport Commissioners for Canada showing that there were 378 accidents at rail way crossings in the Dominion during 1945. These accidents resulted in a death toll of 129 persons and a total of 598 persons were injured some of them seriously, as the result of contesting the right of way with a train.

The Board, breaking the accidents down into various compartments in order to determine underlying causes reports that in 107 cases, nearly a third of the total it was the automobile which ran into the train.

In most other cases appears the entry "Automobile drove

## Golf Club Organize

A meeting of the Carbon Golf Club was held on Monday evening when a group of enthusiastic golfers made plans for the coming season.

The meeting teed off with election of officers which resulted as follows, President, O. Schielke; vice president, Albert Schell; secretary treasurer, A. McLeod; membership committee, O. Schielke and A. McLeod. The financial statement revealed that a number of members neglected to pay their fees last year as only \$11.00 was collected.

The fee this year was set at \$3.00. A considerable amount has been collected this week.

Not being in a position to pay a caretaker for the course members are allotted certain greens to repair and maintain throughout the season.

## CARBON

CARBON SPORTS, MAY 24th

Mr. and Mrs. H. Greenlee were Calgary visitors Sunday.

Mr. and Mrs. C. H. Nash were Stettler visitors last Wednesday and Thursday.

There will be a service in Christ Church, Carbon, Easter Sunday, April 21st, at 10 a.m. Rev. C. J. Brown in charge.

Ray Campbell, manager at the local locker plant, attended a convention of in Calgary this week.

CARBON SPORTS, MAY 24th

Jack Graham, who has been farming the Talbot place south of Grainger is moving to Olds where he has purchased a farm. Mr. and Mrs. Gordon Ward and family will be the new neighbors on the Talbot farm.

Anyone having baseball or hockey equipment should turn same in to Ernest Fox or Glen Levagood immediately.

Don't forget the Legion dance in the Scout hall, Friday, April 26th. Rosebud Orchestra.

All Carbon elevators will be closed every Wednesday afternoon from now until August 1.

Mr. and Mrs. C. L. Reid of Kelowna, B.C., Mr. and Mrs. W. Rogers and J. Webb of Calgary were week-end visitors at the C. Trumbley home.

More locals on back page.

onto crossing in path of train and was struck"

Indicating that impaired visibility has a direct bearing on ratio of crossing accidents, as it has on most other forms of mishap involving motor vehicles, statistics reveal that the months of November and December are most prolific in accidents of this sort. During these months days are shorter and the cold weather tends to cut down visibility by frosting windshields and windows. The imperative need for widespread use of anti-frosting and defrosting devices on all types of motor vehicles, including farm trucks is clearly evident.

Above all, however, seems to be the need for caution at all times. The railways are doing their best to cut down the crossing accident toll by constant education among their employees and the public, and the Dominion government assists greatly through administration of its level crossing fund. Nothing, however, can save drivers from their own folly.

WORLD HAPPENINGS  
BRIEFLY TOLD

One of the "strangest air cargoes" ever landed at Dorval airport arrived in a special plane bringing \$65,000 worth of live chinchillas to Montreal.

The last of Canada's 103 surplus corvettes—saucy, tubby little craft that plagued the Nazi U-boat packs—have been sold by the War Assets Corporation.

The Soviet Union intends to increase its cultivation area this year by 20,500,000 acres, as part of the new five-year plan, Moscow radio said.

Over 1,000 "splendid types" of Japanese women, all over five feet tall, responded to a Metropolitan police call for 50 policewomen, the newspaper Mainichi Shimbun said.

A bust of Gladstone is to be removed from the town hall at Killenny, Eire, because councillors believe no shadow of a former British prime minister should fall on the assembly rooms.

A police school for recruits for the Gibraltar Police Force, has been opened. The recruits are trained on the syllabus of instruction for candidates for the Metropolitan Police in the United Kingdom.

Sir Alexander Fleming, discoverer of Penicillin, has been awarded the Harben Gold Medal for 1946 by the British Royal Institute of Public Health and Hygiene for "Eminent services rendered to public health."

A ceremonial scarf for King George, together with a letter containing Tibet's congratulations on the Allied victory, was received by Viscount Wavell, Viceroy of India, from the leader of a Tibetan goodwill mission.

GARDEN  
NOTES

## Showy Flowers

An amazing showing can be made with a few annual flowers. Cosmos, giant marigolds, zinnias, petunias, portulaca, nicotiana, calendula, alyssum, nasturtiums, etc., are easily grown almost anywhere in Canada. Some of the larger flowers can actually be used in place of shrubs. Seeds should be started early and in finely prepared soil. Plants are transplanted to permanent positions when they are well established with several sets of leaves. Ready started bedding plants can be bought. For husky growth, cosmos, gladioli, dahlias, giant marigolds and zinnias should have about two feet each way—petunias need about a foot apart.

## The Handy Plot

The old-fashioned kitchen garden had a lot to recommend it. This is the small plot of ground, perhaps only 20 feet square, right at the door. In this position it is handy, especially when one wants to get a few onions or lettuce in a hurry, and it is an amazing thing how much produce one can grow in such a space.

As a matter of fact, for the average smaller gardener it is best to grow beets, beans, lettuce, radish, carrots, etc., in rows close together in a kitchen garden of this kind rather than in longer rows out in the main garden. The latter, of course, is used for big, bulky crops like corn, potatoes and peas and possibly the main crops of beans, but the heavily planted, often cultivated kitchen plot near the house is an ideal location for the other stuff. Located close to the house one can often spend odd minutes in cultivating and weeding when it would not be practical to make a trip out into the big garden. Whenever possible this kitchen garden should be located where it can be watered in very dry weather.

## Not Too Soon

There is always one spot in the garden which dries up first in the spring and here, if one wants to make the earliest start possible, is where first vegetables or flowers should be planted. But it is most important, the experts warn, that the soil be really fit to work. If it is muddy then it isn't ready and there is nothing to be gained if digging or plowing is done too soon. Heavy soils especially if cultivated while still wet will bake into hard lumps and it may take weeks or even months of hard, back-breaking digging to break them up fine again.

A good test to make sure that the soil is ready is simply to walk over the ground where one plans to plant. If the soil muddies the boots then it is too wet, if it shakes off readily or if it crumbles when squeezed in the hands and does not compact into a ball, then it is fit to work.

Experienced gardeners advise cultivating as thoroughly as possible before planting. The reason they emphasize this early digging, especially in ground that has not been cultivated every year for some time, is to get rid of twitch grass and other weeds. It is much easier to clean these pests out by the roots before the rows are planted and there is plenty of room to operate.

## CANADIAN CURLING SUPREMACY

THE MACDONALD BRIER TANKARD WON BY  
SEDEGWICK, ALBERTA, CURLERS

THE SEDGEWICK FOUR—Left to right: Austin R. Smith, second; Bartley Swelin of Hughenden, third; Billy Rose, skip; George Crooks, lead.

A veteran Alberta four skipped by Billy Rose won the Macdonald's Brier Tankard, emblematic of Canadian curling supremacy, by besting a stubborn northern Ontario rink from Kirkland Lake 8-6 in as thrilling a match as the roarin' game has seen in many a 'spiel.

In posting Alberta's fourth victory in 17 years of Brier bonspiel play, Rose and his men of Sedgewick—George Crooks lead, Austin Smith second and Bartley Swelin third—took the hard road.

They wound up in the regular nine-game round robin play with seven victories and two defeats—enough to put them in a tie with the highly-favored Manitoba champions and northern Ontario for first place. They barely edged out Ontario 10-9 for the seventh win.

But the Alberta champions—three of them come from the little community of Sedgewick with a population of 500 and Swelin from the nearby village of Hughenden—drew on courage and the 15 years' curling experience each of them had when the play-offs came up.

Displaying the most perfect curling of the bonspiel, they eliminated Manitoba 8-7 in the semi-final—revenge for one of their two defeats in regular play—and then triumphed in the final. With uncanny repetition Rose in those two games played knockout and draw shots dead on time after time.

Tommy Ramsay's Kirkland Lake quartette went into the 11th end on

even terms with the Alberta representatives. The rinks had posted no score higher than a two and few of those up to that point.

But on the 11th Rose almost made sure of his championship. He had six in the house when Ramsay's last stone drew in to better five of them and leave him with only a single.

The last end was just as tense. Skip Ramsay was just a fraction too heavy on his last shot and his stone went too far, leaving one Alberta rock in the house for another single and the tankard.

It was 2.30 a.m., MST (4.30 a.m., EST) when the final finished and nearly 3 a.m. when the new champions, headed by the pipe band of the Saskatoon Light Infantry, marched back on the ice to receive the tankard and individual prizes.

## Final Game

Alberta ..... 010 202 010 011—8  
Northern Ontario 200 010 101 100—6

## WILL FLY HER OWN

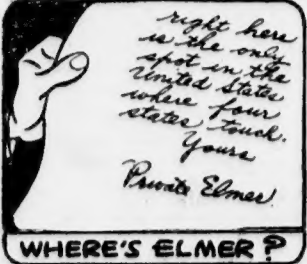

A new civilian air base at Larder Lake, Ont., now is the centre of civilian flying operations helping to open up a vast new field of mining possibilities. Some prospectors fly their own machines. And, ready to buck this last masculine stronghold is Miss Mary Ramsay of Kirkland Lake, who hopes to get her private pilot's licence soon.

Few people in Hawaii speak Hawaiian as English is the language most widely used.

## Is Losing Out

Doctor Predicts Penicillin Will Become Useless For Some Diseases

Penicillin is losing its punch so rapidly that it was predicted this wonder drug may become almost completely useless in a few years for some diseases.

The trouble is not in penicillin but in special strains of germs, present in many diseases, which are able to resist penicillin, and which are spreading rapidly while their fellows are being destroyed by the drug.

The prediction was made by Dr. Hans Molitor, of the Merck Institute for therapeutic research, in a report to the federation of American societies for experimental biology.

Surfaces which reflect none of the sun's rays appear black. Surfaces which reflect all of the sun's light rays appear white.

## Wants To Make Tests

Man Has Idea His Invention Would Defy Atomic Bomb

Jean Lussier, who went over the Horseshoe Falls in a rubber ball on July 4, 1928, announced that he would like the United States navy's permission to test a new type rubber ball against the atomic bomb.

Lussier has started plans to interest naval authorities in his newest proposal. It is to house rabbits with food enough for a week in the smallest of three specially designed concentric rubber balls. He said the atomic test device would consist of balls 12 feet and 5 feet respectively in diameter. He plans to line each space except the inner rabbit quarters with protective lead, asbestos and cork.

In reading, our eyes concentrate on the tops of the printed words.

### OUR COMPLETE SHORT STORY—

## Constant Reader

By PHIL GLANZER

Copyright  
Wheeler Newspaper Syndicate

GERRY DOHERTY stood in the doorway of an automat on the west side of Times Square and gazed steadily across at the Palace. The theatrical trade sheets used to say that when you had played the Palace you had made Broadway.

Gerry felt funny inside as that thought flashed through his mind, his lips tightened as he remembered the night a few seasons back when he stood in this same doorway and thrilled at the sight of his own name in the electric lights of the Palace marquee.

His mind lagged. He leaned against the building and got to dreaming.

Two shows a day in those years, opening Monday matinee. He remembered how nervous he was on his first date at the house. Monday matinee was when all showfolk in productions on Broadway and every ace vaudeville performer who could make the date, dropped in to "catch" the show. Also there were agents who could snap up an act for a production or offer 40 to 50 weeks booking on another circuit.

Gerry, doing a single, had been assigned the toughest spot on the bill, No. 2 spot. And the heart jumped clean out of him when he heard his cue music on that Monday afternoon.

But his feet didn't go back on him, he gritted his teeth and at the first murmur of approval went into a routine that completely stopped the show. On Monday night he was moved to next to closing so that the show would not be stopped before the headliner came on.

The people from the subway circuit dawdled over their coffee and cake in Silver's, Thompson's, and the Automats, and told one another of a hooper who had come out of the west to stop a Palace show in the deuce spot.

The people from the two-a-day dawdled over their coffee and tried to recollect if this hooper had ever played a bill with them anywhere. He was going up and he'd be a good guy to know. The Broadway columnist, paragraphed about him and steered him into Sardi's, or Lindy's or the Hollywood for a gagfest, Gerry Doherty had clicked!

It was only a few weeks later that he again played the Palace, strutting out in front as the big feature of a "flash production act," on at 9.45 at nights, 3.45 at matinee—billed big and headlining the show.

Even when the agents and the chiselling back-stage friends who knew him had got theirs each week he was still in the big money and it was inevitable, perhaps, that he should meet and fall in love with Gloria Templeton, one of Broadway's biggest stars.

He didn't know that syndicated columns turned out by the New York gossip columnist carried that news to little Irene Summer back in Madison, Wisconsin.

He didn't know that the kid who used to sit happily out front on amateur nights at The Happy Hour Theatre and the Starland and the Triangle and applaud his footlight starts, and tell him how wonderful he was later when they were walking down that silent tree-lined street, cried herself to sleep the night she read a flippant observation of Arthur Allison in the News-Review: "Gerry Doherty, whose dance review on the current Palace bill is tying the show in knots, and Gloria Templeton, star of 'Dusty Horizon' at the Belmore, are about each other."

Nor did he know, at that time, that hoofers and dramatic actresses make queer teams when fettered by matrimonial harness. But he knew later, and strangely enough, it had been Arthur Allison who informed him and the whole world with a brief line: "Gloria Templeton, Gerry Doherty's Ex, whose decree became final yesterday, and Raymond Tanner, heir to the Department Store millions, will tell it to a preacher before rent day."

Gerry's world had fallen from under him then. Talkies came in and vaudeville went out and hoofers, good and bad, came at a dime a dozen. From his apartment, which was located on Central Park West, he moved to a Times Square hotel. He kept that up as long as he could but with no bookings and little heart for work anyway, he had ended up in a theatrical rooming house over on 47th near 9th avenue.

That thought brought him out of his dreams. Two weeks in arrears on rent and 25 cents left to his

name. A fine drizzle had set in and Gerry started across the Square toward Silver's Coffee and cakes and maybe a pal who had "touched" him when he was in the money.

At the 48th he waited for the flow of crosstown traffic. The lights flashed and Gerry stepped from the curb. As he did, a racing taxi, trying to beat the light, pulled up with a screech of brakes. The wet pavement was like ice to the rubber and the car skidded sideways. A girl screamed and things went black for Gerry.

Unknown to Gerry, Arthur Allison's column hit the streets that night with a line: "Gerry Doherty, once Broadway's ace hooper, is in Polyclinic's public ward—without funds. Perhaps some of his former pals would like to know." Broadway read that column, and let it be said for show business that three of his "former pals" kicked in. But a fourth former pal, who read the column three days later out in Madison, didn't kick in. She took the first train out for New York and a new light shone in her eyes.

Gerry cried when Irene walked in on him, but the columnists didn't know about that. The last they heard of Gerry was that he had married some dame from Madison, Wisconsin, and was running a cigar store out there. They didn't even bother printing it. Gerry wasn't news any more running a cigar store in Madison.

But because Arthur Allison is still read by Irene and Gerry it would be nice if someone would tip him off to mention in his column that "The Gerry Doherty's are tiny garment-shoppers!"

#### Fitted Apron

Can be made  
from feed bag

By ANNE ADAMS

A gay apron that fits well, gives ample coverage, sews up quickly! Pattern 4586 requires little fabric. In fact, if you've a grain or feed bag, you can make it from that!

Pattern 4586 comes in sizes small (32-34), medium (36-38), large (40-42). Small size 1 1/2 yards 35-inch.

Send twenty cents (20c) in coins (stamps cannot be accepted) for this pattern. Write plainly Size, Name, Address and Style Number and send orders to the Anne Adams Pattern Dept., Winnipeg Newspaper Union, 175 McDermot Ave. E., Winnipeg, Man.

#### Cannot Go Alone

##### Tourists Compelled To Take Guide When Exploring Jasper Park

It is a rule in Alberta's Jasper Park never to leave a man in the mountains alone. Fred Brewster, a pioneer Jasper guide and a Rocky Mountain oracle, lays down the law on this point.

No one has been lost yet, but with 6,785 square miles of forested parks and 11,000 foot peaks for tourists to explore, Alberta authorities take no chances. A veteran mountain man finds no terror in being alone in the wilds, but he knows the trick of caring for himself, and few tourists possess this knowledge.

#### LONGEST NON-STOP RUN

The world's longest regular non-stop railway run is that between London and Edinburgh, 393 1/2 miles, and the second from London to Carlisle, 293 miles, according to British Railways.

##### Speech Therapist Is Helping Veterans At Toronto Hospital

It takes much patience and understanding to do Margaret McCurdy's work at Christie St. Hospital in Toronto. But the young Montreal-born speech therapist has won praise from both doctors and veterans alike for the help she has given aphasic patients at the hospital.

Miss McCurdy is the only speech therapist in Canada working for the Department of Veterans Affairs. In her "classroom" at Christie Street are some speechless veterans, some unable to read or write and a few who cannot understand speech.

A mirror plays an important part in her classroom. Standing before the mirror the patient sees how he forms his lips for words, guided by Miss McCurdy.

Twenty-four-year-old Tommy, a private in the 48th Highlanders, was knocked back into infancy when he was shot in the left side of the head during the fighting in Holland. Today thanks to Miss McCurdy he can speak again and is learning once more how to read and write.

#### Are Early Risers

##### This Story Proves Farmers Do Not Sleep In Morning

An amusing story was published the other day in the Louisville, Kentucky, Courier-Journal, as follows:

Two farmers, jealous of each other's early rising records, became boastful. One allowed as how he got up before 3 a.m.

His rival, hoping to catch him in a fib, rose at two the next morning and went to call on his bragging neighbor.

When the latter's wife answered the door and was asked where her husband was, she replied: "Dunno—but he was around early this morning."

It's a laughable exaggeration, of course, but it serves to draw attention once again to the fact that farmers rise early and work long hours. Their situation appears odd in a world where most of the workers are clamoring for shorter hours and more pay, and there is little wonder that some rather acrid comments on the labor situation have been heard from farmers recently.—Kingston Whig-Standard.

The sun loses 4,000,000 tons of mass per second, a speck of dust in relation to its total mass of two billion billion billion tons.

#### WINNIPEG GIRL IN FILM LEAD

—One year ago, blonde Dorothy Patrick was just another Little Theatre player in Winnipeg. Now she has been handed one of Hollywood's choicest acting plums—the role of Jerome Kern's wife in M.G.M.'s film biography of the late composer, "Till the Clouds Roll By." A former Powers model, she will play opposite Robert Walker.

#### BUILT IN ONE DAY

Prefabricated houses, consisting of four rooms with wooden floors and tiled roofs, now are being produced by a building firm in Nairobi, Kenya, to help solve the African housing problem. They cost about \$160 (\$720) and can be erected in one day.

# Green Cross

modern insecticides, fungi-  
cides and herbicides for  
farm and garden. Your  
dealer will have full inform-  
ation soon.

\*Trade Mark Reg.

LOOK FOR THE "GREEN CROSS"

"Have a care Jack Dalton! Unhand that package  
of crisp, crunchy, delicious Grape-Nuts Flakes!"

"Curses! Foiled again! Every time I try to make off with some malty-rich, honey-golden Post's Grape-Nuts Flakes I'm stopped by this guy Curly Crisp!"

"And why not? That's a neat package you've got there. Those Grape-Nuts Flakes supply carbohydrates for energy; proteins for muscle; phosphorus for teeth and bones; iron for the blood; other food essentials."

"But these are no ordinary flakes! They're made of two grains—wheat and malted barley. And skillfully blended, baked and toasted for crispness, tempting taste and easy digestion."

"Hand over that giant economy package, villain. I'm a bit wolfish myself, when it comes to Grape-Nuts Flakes!"

## MEN PROMISED MORE SHIRTS

Further steps tightening up directives to manufacturers of men's and boy's shirts have been taken by the Prices Board to help alleviate the shortage of these garments.

Increased supplies of fabrics are being made available to shirt manufacturers out of quotas received from the United States. Directives to manufacturers prohibit them from using shirting material for any garment other than men's shirt. The Board has also directed that manufacturers may not hold more than one month's production of shirts in inventory. Although these measures are expected to alleviate the situation, the Board warns that it will take several weeks before results are apparent in the retail stores.

## BIG PAINT JOB

Details of a 10-ton paint job on the giant British liner Queen Elizabeth have been recalled after a long war imposed blackout.

The huge paint job one of the most unique in the history of painting in Canada, was carried out in 1942 when the ocean queen was undergoing conversion into a troop transport at Esquimalt. Twenty four dozen special 4 inch brushes as well as a number of other types of brushes, worth \$4,000 in all were used in completing the job.

The 20,000 pounds of paint was vital to protection of the ship in two ways: as camouflage in dangerous seas, and as an enemy of the rust and corrosion which eventually would have brought about a breakdown in the vessel's operation.

## FEED BARLEY AVAILABLE

Barley for feed purposes can now be released to meet the needs of districts where shortages exist. Because of the relatively short barley crop it was evident last fall that such shortages would occur and arrangements were made by the feeds administrator for a barley feed bank in the terminal elevators at Edmonton and Calgary.

Farmers who wish to obtain this feed grain are advised by A. M. Wilson, Field Crops Commissioner, to place orders with their regular dealer who in turn by making application to the feeds administration in Vancouver can have barley released from the feed bank in carload quantities.

Further particulars with respect to these reserve stocks of feed grains are available from the regular feed and grain dealers throughout Alberta.

## "BEAVER" COUPONS ARE STILL VALID

To clarify a misunderstanding on the validity of certain ration coupons officials of the ration administration point out that the unnumbered coupons for sugar, butter and meat, stamped with the beaver, and issued servicemen, transient labor and for other special purposes are still valid.

Beaver stamped coupons on temporary ration cards for sugar, butter and meat are colored pink purple and brown respectively. These coupons are all negotiable.

Numbered coupons in ration book five recently expired for sugar, butter and meat, include pink sugar coupons numbered 46 to 70 and brown meat coupons numbered 1 to 26 which expired at the end of March. All numbered purple butter coupon in ration book five were expired by the Board at the end of February.

## OFF THE RECORD

OTTAWA — A nomination should go forth to the inventors of the atomic bomb for the Noble Peace Prize in view of the current events on the international scene!

## Seed Treatment Recommendations

Seed treatment pays. It is the most practical and effective means available for preventing the enormous losses caused by the smut diseases of grain crops in Western Canada. Unfortunately, these losses are on the increase. In 1946 therefore, the treatment of seed grain should be regarded as a cheap form of crop insurance.

Owing to the gravity of the smut problem, plant pathologists from Manitoba, Saskatchewan and Alberta have officially recommended that, in 1946, all seed of wheat, oats and barley should be treated for the control of the surface-borne smuts unless field observations or examination of the seed has failed to reveal the presence of these smuts. In other words, farmers are strongly advised to treat all seed grain unless it has been examined by Line Elevators Farm Service, or some other seed-testing organization, and found to be free of smut. For flax, it is strongly recommended that all seed be treated with a mercury dust before it is sown.

The organic mercury dusts (Ceresan, Leytosan, etc.) are by far the most effective seed disinfectants for use on seed grain and flax. For wheat, oats and barley the rate of application is 1/2 ounce per bushel of seed; for flax, 1 1/2 ounces per bushel. After treatment, the seed should stand for at least 24 hours before it is sown. Well-cured seed may be treated one or two months in advance of sowing. Formalin should not be used for seed wheat or hullless varieties of oats and barley because it invariably injures seed germination. Persons treating seed with a mercury dust should strictly observe the directions and precautions given on the label of the container.

For further information on seed treatment, write to Line Elevators Farm Service, Winnipeg.

## PRICE INCREASES FOR FURNITURE

To offset cost of materials such as cotton, feathers, metal wire for springs, the Prices Board has authorized price increases from 16 to 25 percent for certain types of bedding and upholstered furniture.

The increase allowed will be 16 to 25 percent over present selling prices of mattresses, 25 percent for pillows and comforters, and 20 percent for studio couches.

## TWO COATS BETTER THAN ONE

In finishing furniture, as in any other type of paint application job two thin coats are better than one thick one. The reason is simple, evolving out of the drying process of the varnish. When a heavy coat is applied, the surface varnish dries quickly and seals over, so that solvent is trapped underneath and the air can't get in to oxidize the oils. The entire drying process is interfered with so that the varnish checks or becomes brittle on top and spongy underneath.

## PROTECT YOUR CROPS FROM SMUT

Standard Formaldehyde is the POSITIVE SMUT KILLER, 100% effective, used and endorsed by Western Farmers, including many World Wheat Championship winners, for over 35 years. Stop the inroads of Smut. Treat your seed at seeding time with Standard Formaldehyde. Easy and safe to use, requires no special equipment, costs far less than other methods, and is specially prepared for Prairie Farmers.

## FROM THE EDITOR'S DESK

### Are You a Booster?

If you want a live town encourage the man who is trying to do something for it. He may become weary at times and should be encouraged. Don't get jealous of him and throw cold water on his efforts. It is more difficult to build up than to tear down; that is why so many are engaged in destroying what a few are creating. A half dozen active men are worth more than a dozen passive. It takes more enterprise than money to build up a town. If you can't push crawl out of sight and sit down. If you can't say a good word, say nothing. All live towns are after improve-

ments. The business man of these days is not hitching himself to a community of moss-backs. He wants to rub shoulders with men of his kind. The town that exhibits signs of progress, that looks healthy, clean and busy is the place that will attract the promoter of new lines of business.

So get behind your town council, your Community Club. Help clean and fix up our park. Paint your buildings if you can. and for goodness sake don't try to hinder the village council in their attempt to put water and sewage in Carbon. That's all.

### The Good Old Days

Remember when the salesman used to say "that will wear like a pig's snout" and in many cases whatever he was selling you (generally referring to clothes) did just that little thing. The knees of trousers might get worn a little shiny from kneeling on the prayer stool the seat of those same trousers might become shiny from contact with an uncushioned chair but they never seemed to wear through. Shirts would withstand a four inch chest expansion when we did anything of which we were unduly proud, buttons would not pop off vests at the least strain and other vulnerable points of clothing which were not then equipped with zippers were spots where trustworthy buttons never made one turn red in the face. Those were the good old days for the male sex. The opposite sex might have similar things to brag about but not being so familiar with their wearing apparel we would not venture any remarks thereon. Those old "pig's snout" clothes were the real thing.

It is no doubt the reduction in hog production in western Canada which has caused the

scarcity of the "pig's snout" type of clothes for men. Today when the knees of your trousers become shiny, beware of how you kneel. When the seat of your trousers become shiny, thrice beware of how you stoop.

The way modern buttons are sewn on one should always wear both belt and suspenders to insure safety in keeping vulnerable portions of the form properly protected against cold and prying eyes. Present day shirts, even with the goods formerly put in a pocket or pockets for reinforcements, will not permit much chest expansion without taking undue chance on an accident. Vests will also pop buttons from such a simple thing as a generous dinner. As for other parts of clothes which are now zipper protected there is a certain feeling of safety but yet these same zippers will at times place a man in a most embarrassing position and they are most certainly the most aggravating thing that ever made a part of male dress. However one could abide with them if someone would only put some men's clothing on the market which the salesman could truly say "will wear like a pig's snout"

### Booklet Tells About Flax

Particularly timely because of the recent increase in the price of flax to \$3.25 a bushel, an interesting little booklet has come to our attention. Entitled "The Truth About Flax" and published by The National Barley and Linseed Flax Committee, the publication is one which might well be studied by every farmer, whether he is growing flax or not.

Publication of the booklet came just prior to the announcement of the increase in the flax price by Trade Minister J. A. MacKinnon at Ottawa. Mr. MacKinnon said the increase was a step to encourage the production of oil seeds, and added that "the government wishes to emphasize the importance of flax

during the present crop year and to urge producers to seed a larger acreage in 1946." All of which makes "The Truth About Flax" timely and interesting.

The booklet asks a variety of questions about flax such as are likely to come into the mind of the farmer, and supplies the answers. Chief points it makes might be summarized as follow

Flax is a much misunderstood crop, but those farmers who have grown it consistently state that it is most profitable over a long term of years provided good cultural practices are combined with careful planning. The booklet quotes successful flax growers to back up its contention.

### THE WORLD OF WHEAT

What Caused the Low Prices?

An honorable member of the House of Commons recently stated that in 1920 the price of wheat was \$2.73 a bushel and that one year later the price had fallen to \$1.10, a decline of 59 percent. The member thought that such great declines in prices could be prevented if government boards would have the exclusive sale of our wheat and other products.

The drop in the price of wheat mentioned is quite correct. The futures market, however, had no more to do with this decline in price than it had to do with the great tidal wave which has just occurred in the Pacific, for during that same 12 months between 1920 and 1921 the prices of all commodities all over the world declined on an average 51 percent, and many commodities fell lower than wheat. Potatoes 84, cotton 81, corn 79, jute 64, tin 64, rubber 64, oil seed 64, sheep 64, rice 60 lead 59, wool 58 and flax 57 percent. It is apparent, therefore that the great declines in prices which took place during those 12 months were due to deep worldwide forces that had nothing whatever to do with futures markets and which declines no marketing board could ever have prevented. Fluctuations of prices caused by trading on futures markets are quite minor, and tend to improve prices never to depress them, as so many Royal Commissions have pointed out. The remedy for depressions is to correct the bad worldwide conditions, and not to close futures markets which merely register prices and do not make them.

### PORK PRICES ARE INCREASED

Domestic wholesale price ceilings on pork carcasses and sides were increased 2 1/4 cents a pound April 1, in order to maintain the relationship between domestic and export prices of pork.

While weeds are inclined to be a problem wherever flax is grown, many farmers have made weeds a minor consideration by obtaining clean seed, using a planned rotation and following sound cultural methods.

Flax, properly handled is not hard on the soil. The popular belief to the contrary sprang from the days when flax was being introduced to the prairies, a time when it was grown only on spring prairie breaking. While a good crop was produced it did not provide for the proper rotting of the sod and succeeding crops often were poor. That condition was overcome and can be overcome, by summer fallowing.

Wilt, for many years a bug-bear of flax growers, can be overcome by use of wilt-resisting varieties now available. In the same way, development of rust resistant flax strains has helped overcome the worst disease to which flax crops of the past were subject.

The booklet available on request from the committee in Winnipeg, tells about choosing the field for flax about the proper crop, rotation, weed and disease control preparation of the seed bed, the varieties of flax most suited to the different sections of the prairies, and about methods of harvesting and marketing.

"Flax is a high-priced crop and requires good farming methods," the booklet concludes. "High flax yields demand careful planning, good seed and correct cultural practices. When these are followed, flax should earn a prominent, profitable place in every crop program."

## Co-operation In Education

THERE WERE FEW ASPECTS OF LIFE which were not affected by the German conquest of Europe, and the task of restoring the occupied countries is an enormous one. One of the many urgent needs is for the re-building of educational institutions, which were often wilfully destroyed by the Nazi invaders. In 1942 a conference of Allied Ministers of Education was called in London, when plans were discussed for providing assistance in restoring the schools and colleges of Europe after the war. Later, representatives from the Dominions of the British Commonwealth, India, the United States, Russia and China were invited to join the original organization, which had consisted only of members from Britain and nine enemy-occupied countries of Europe.

### Book Centre Was Set Up

Early in the present year this work was formally taken over by the Preparatory Commission of the United Nations' Educational, Scientific and Cultural Organization. One important project of this body is to provide books and periodicals for Allied national and university libraries. This work was commenced several years ago, funds being provided by Britain and the Allied governments. An inter-allied Book Centre was opened in London and already nearly half a million books have been collected, through book salvage drives, and as gifts from universities, cultural societies and interested individuals. At present two hundred thousand books come into the Centre each week, and the objective is to have two million books available for distribution at the end of this year. In addition, the problem of providing school equipment and scientific apparatus has been studied, as well as plans for the international exchange of teachers and students.

### May Contribute To World Peace

It has been recommended that this work be incorporated in an educational organization within the structure of the United Nations, and forty-four nations have already agreed upon a constitution for a United Nations' Educational, Scientific and Cultural Organization, the aims of which are "to contribute to peace and security by promoting collaboration among nations through education, science and culture, in order to further universal respect for justice, human rights and the fundamental freedoms which are affirmed for the peoples of the world by the Charter of the United Nations." It is possible that through this work a lasting and constructive contribution will be made to the cultural re-building of Europe, as well as to a greater measure of co-operation and understanding among the nations.

## A Colorful Figure

### British Who's Who Carries Biography Of The Aga Khan

The Aga Khan is a prince above princes. His biography in the British Who's Who lists his honorary degree from Cambridge, his British honors and decorations, his chairmanship of the Indian Round Table Delegation of 1930 and 1931, his presidency of the League of Nations Assembly in 1937, his victories in the Derby, his eleven-gun salute and, almost incidentally, his religious role. He is, in fact, a descendant of Fatima, the daughter of Mohammed, and as such is believed by his followers to have divine attributes. These are not visible to Western eyes. Indeed, he does not parade them for the benefit of his cosmopolitan friends. On the worldly scale he is a character with two phases: an Indian leader who has tried to unite India's Moslems, and has done a good deal for the economic welfare of his Indian followers, many of them converted Hindus; and an international playboy of a type not so common as it used to be.—New York Times.

First editor of the London News-Chronicle, which is celebrating its centenary this year, was the novelist Charles Dickens, 2665

## Price Control And Rationing Information

Q.—How many sugar-preserves coupons become valid in the month of April?

A.—Three of the new combined sugar-preserves coupons will become valid during April, S5 on April 4, and coupons S6 and S7 become valid on April 18. Pink sugar coupons numbered 46 to 70 expire on March 31.

Q.—Will we be receiving another ration book from the Wartime Prices and Trade Board?

A.—Ration book number six will be issued early next fall.

Q.—I heard over the radio while I was listening to "Soldier's Wife" program that we could obtain suggestions from some department of the government in Ottawa for extending butter. Where could I write to obtain these recipes?

A.—These recipes for stretching the butter allowance may be obtained by writing to the Department of Agriculture, Ottawa.

Q.—A friend of mine told me that she bought butter at a store without coupons, by promising them at a later date. Is this lawful?

A.—The law demands that coupons must be surrendered at the time rationed goods are purchased.

Please send your questions or your request for the pamphlet "Consumers' News" or the Blue Book in which you keep track of your ceiling prices, mentioning the name of this paper to the nearest Wartime Prices and Trade Board office in your province.

## SMILE AWHILE

Joy Kalt: "Is he really dumb?"

Bonny Ritchie: "Sure, he thinks a football coach has four wheels."

Joy Kalt: "Isn't that silly! How many wheels has it?"

"Are you sure you can cut up your own meat?" asked Auntie.

"Yes, thank you," replied little Bobby politely. "I've cut up a good deal tougher meat at home."

"What makes you look so dirty?" asked the neighbor.

"Well," replied the little lady of five, "you gave my brother a dime yesterday to wash his face."

"Is there diplomacy in business, dad?"

"Certainly, my son. It's the art of never saying no but always taking a matter under advisement."

Vicar: "How did you get that black eye, Mrs. Green?"

"Well, sir, me 'usband came out of prison last Toosday, which was 'is birthday, and I wished 'im many 'appy returns!"

Young Man: "How about some old fashioned loving?"

Sweet Young Thing: "All right. I'll call grandmother down for you."

"Shirley, are you ready? Your boy friend's car is at the door."

"Yes, mother. I hear it knocking."

Sonny: "Dad, what do you call a man who drives a car?"

Dad (a pedestrian): "It all depends on how close he comes to me, my boy."

The two men hadn't met for 15 years.

"And is your wife as pretty as she used to be?" asked the first.

"Oh, yes," replied the second, "but it takes her much longer."

A waitress asked me what I wanted. "I feel like a sandwich," I said. She said, "Just give me your order. Don't blame me if the place is overcrowded."

"If you don't behave yourself," scolded a worried mother, "I'll call a policeman."

"If you do," answered the child, "I'll tell him we haven't got a radio licence."

"Which would you prefer in your future husband — wealth, ability, or appearance?" asked the pretty girl.

"Appearance, my dear," replied the spinster, "but he's got to appear pretty soon."

### Just Existing

#### Some Homes Too Orderly For People To Live In

We have had the experience, as has probably everyone, of going into houses in which real living is forbidden. These are the ones where there is a mania for cleanliness and order, amounting to a fetish. We often wonder what satisfaction they bring to the too-particular housewife.

There are houses with parlors that are never open, even those where the front door is unused. Expensive rugs must not be profaned by the tread of shoes carrying the dust of the streets.

There are bookcases filled with volumes that must not be handled for fear of smudges, curtains that must not be subjected to the fumes of tobacco smoke.

The family exists mainly in the kitchen. It does not, of course, live. Under such a regime, real living is impossible.—Windsor Star.

### No Time To Relax

#### Chaplain Thinks Americans Being Too Lenient With Japanese

"The Japs are laughing at us behind our backs," according to Father Francis J. McCullough, chaplain of the 306th Infantry Regiment now occupying the southern tip of the Island of Hokkaido.

As a churchman, he believes in tolerance and charity, but he is convinced that the Americans should be more firm.

"It is characteristic of the Japanese to respect nothing but authority," he said. "Their whole scheme of life is based on that principle."

"Until we have had time properly to convince them of the error of such tenets, we shouldn't be too lenient. We can be firm and yet be kind. Only after the Japs have proved an absolute willingness to go along with us should we reward them by relaxing our attitude."

## Here's Speedy Relief For Tender, Aching, Burning Feet

Your feet may be so swollen and inflamed that you think you can't go another step. Your shoes may feel as if they are cutting right into the flesh. You feel sick all over with the pain and torture; you'd give anything to get relief.

Two or three applications of Moon's Emerald Oil and in a few minutes the pain and soreness disappears.

No matter how discouraged you have been, if you have not tried Emerald Oil then you have something to learn. Get a bottle today—at all druggists.

### THE WAY IT WORKS

Going to the new restaurant for lunch. Jones ordered brown bread. The waitress brought him white. The second day he ordered brown and again got white. This went on for a week.

Then he decided that the only way to get what he wanted was to order the opposite. So he started the new week by adding to his luncheon order:

"And bring me some white bread." "But," exclaimed the girl, "aren't you the gentleman who always has brown?"

The first golf balls were made of leather and stuffed with feathers.

## GEMS OF THOUGHT

### BEHAVIOR

Men's behavior should be like their apparel, not too strait, or point device, but free for exercise or motion.—Bacon.

To be always thinking about your manners is not the way to make them good; the very perfection of manners is not to think about yourself.—Whately.

Simplicity of manner is the last attainment. Men are very long afraid of being natural, from the dread of being taken for ordinary.—Jeffrey.

There are men whose manners have the same essential splendor as the simple and awful sculpture on the friezes of the Parthenon.—Ralph Waldo Emerson.

Right motives give opinions to thought, and strength and freedom to speech and action.—Mary Baker Eddy.

Nothing except what flows from the heart can render even external manners truly pleasing.—Blair.

## King George Will Open Empire Scientific Conference To Be Held In Britain This Summer

WELCOMING the news that an Empire Scientific Conference, to be opened by His Majesty the King, will be held in London, Cambridge and Oxford in June and July, The London Times wrote on 1st March. While the greatest goodwill has always existed between those engaged in scientific research in different parts of the Empire, collaboration has been largely restricted to a discussion of particular problems in pure and applied science between individual workers in narrow fields.

The war brought into being the British Commonwealth Scientific Office, one of whose tasks was to survey the broad problems of wartime science as they arose in different parts of the Empire, so that the approach to the U.S. for interchange of scientific opinion might be co-ordinated. Within the Empire, the scientific problems of peace, both technical and academic, are however no less pressing than those of war. There are, for instance, urgent questions of medicine, especially tropical medicine, agriculture nutritional science and the world fishing industry, while in the more academic field radio, communications and cosmic rays present problems which can only be solved by joint efforts in all parts of the globe. The King will open the Empire Conference and everything is being done to convince visitors that their presence is regarded as a precedent of high promise. It seems certain from the spirit in which the invitations have been accepted that harmony and mutual profit will characterize the summer meetings.

Imperial scientific collaboration was first put on an official basis with the foundation of the Imperial Institute in 1878. The outstanding example of a centralized organization working for the benefit of the whole empire is the Council of Imperial Agricultural Bureaux formed in 1929 to administer bureaux in Britain which act as clearing houses for information on such subjects as soil, science, animal health and forestry. Since 1942, the Dominions have had scientific representatives in London and United Kingdom scientists have been working in Ottawa. In 1941, a British Scientific Office was set up in Washington to facilitate scientific exchange with the U.S.A. When the office was reinforced by missions from all the Dominions, the name was changed to the British Commonwealth Scientific Office. A proposal from the Dominions' missions that co-operation should be continued in peacetime and something like the B.C.S.O. set up in London will be one of the matters to be discussed at the coming conference. The latter is the outcome of wartime visits by Professor Hill to India and Sir Henry Tizard to Australia and Canada, which were followed by the appointment by the Royal Society of a Committee to consider postwar Empire scientific collaboration. At the Royal Society's conference the scientists will discuss their problems as individuals, but this will be followed by a Commonwealth Scientific Official Conference to discuss collaboration on scientific matters of direct interest to the Commonwealth Governments. The latter conference will be organized by three United Kingdom Government departments—the Department of Scientific and Industrial Research, the Agricultural Research Council and the Medical Research Council. Concurrently, the Imperial Agricultural Bureaux will be holding a review conference.

The Times points out that the United Kingdom Government, wishing the Empire Scientific Conference to be held under the highest auspices, though not under official supervision, has entrusted the arrangements to the Royal Society "the oldest scientific academy in the world, whose name inspires confidence in all that pertains to science." The Royal Society was founded two hundred and eighty-six years ago, although its nucleus was formed fifteen years earlier, in 1645, by a group of men who met weekly to discuss "new and experimental philosophy". In 1662 King Charles the Second requested membership, and the name of the Royal Society, or more fully The Royal Society for Improving Natural Knowledge seems first to have been applied by John Evelyn, the famed diary writer. In these early years, the meetings were occupied by the performance and discussion of experiments, and one of the first lectures was by Christopher Wren. Isaac Newton was elected a fellow in 1671 and was later President. A Museum was collected, which was later presented to the British Museum.

Ever since the days when Charles the Second instructed the Royal Society to carry out work to restore

Britain's greatness and prosperity and to bring to a successful conclusion the sea war against the Dutch, the Society has been of vital service to the country in all scientific matters. Within ten years of the granting of its charter, it was grappling with problems relating to the nation's food supply, navigation and naval architecture, and since then has constantly been appealed to by the Government for advice. Although working closely with the State, it has never been state-controlled.

In 1710, the Royal Observatory at Greenwich was placed in its sole charge. The early work of the Society included the change of the calendar, the ventilation of prisons and the prevention of jail fever, the protection of buildings and ships from lightning, Geodetic and general trigonometrical surveys, exploration of the Northwest passage, and Antarctic expeditions under Captain Cook and others. More recently it has introduced safety measures in connection with gas lighting, reorganized the meteorological department, instituted investigations into colour blindness, volcanic eruptions in the West Indies, international seismological investigations, international exploration of the upper atmosphere, and has taken the lead in investigations and important discoveries on tropical diseases, including malaria and sleeping sickness. During the recent war the resources of the Royal Society have been at the Government's disposal for the development of many new British discoveries, for example penicillin, radar and work on atomic energy.

The election to Fellowship of the Royal Society is on merit and a coveted honour. There are today about four hundred and fifty Fellows and fifty Foreign Members. The President is Sir Robert Robinson, the famous chemist and among well-known fellows are Sir Henry Tizard, the aeronautical expert; Professor Andrade, physicist; Dr. Salisbury, director of the Royal Botanic Gardens; Professor Le Gros Clark, anatomist; and Professor A. V. Hill, the wartime secretary, now foreign secretary of the Society and one of the Government's leading scientific advisers.

### Conserve Feed Supplies

#### Saskatchewan To Develop Long Range Fodder Production

Steps will be taken this year by the Saskatchewan government to conserve feed supplies and develop a long-range program for fodder production in all deficiency areas in the province, it has been announced by Agriculture Minister I. C. Nollet.

Mr. Nollet said that the agriculture department wanted local groups to organize in order to create fodder reserves for at least one drouth year. He said that "the possible use of vacant lands and irrigable areas for this purpose will be fully investigated."

A committee named by the minister of agriculture conducted surveys of two municipalities in 1945. These surveys dealt with grass land, water supplies, irrigation possibilities and pasture development. The studies will be continued in order to develop policies for land use.

### Make Linens Gay

7157

by Alice Brooks

Make yours a colorful, gay linen collection! Embroider towels, scarfs and pillow cases with these lovely floral motifs. Simple stitchery.

Easy embroidery for casting enchantment over linens. Varied colors for gaiety. Pattern 7157 has six motifs, averaging 4 1/4 x 12 1/2 inches.

To obtain this pattern send twenty cents in coins (stamps cannot be accepted) to Household Arts Department, Winnipeg Newspaper Union, 175 McDermott Avenue E., Winnipeg, Man. Be sure to write plainly your Name, Address and Pattern Number.

## Royal Air Force Carrying Out Job Of Disarming The Luftwaffe Very Thoroughly

(Aeronautical Correspondent of The London Times)

SINCE the end of the European war the strength of the British Air Forces of Occupation in Germany has been reduced by rather more than half. It now stands at about 50,000 officers and men and 25 operational squadrons, and it is expected that this will be its permanent size. The pilots are doing more flying now than they did during the war. The average works out at some 260 hours a year, made up of routine patrols which serve the double purpose of "showing the flag" and providing training, and combined exercises with heavy bomber squadrons based in England.

At regular intervals Bomber Command squadrons fly out from England to make mock attacks on German centres, and Mosquitoes go up to intercept them. The German ground control system has been tried out, but the radar devices were so inferior that British equipment is now used. Night fighter units serve for a fortnight under BAFO and then give place to others sent from England. In this way all the squadrons are acquiring varied experience.

The two main tasks of the RAF in Germany at present are the dismantling of the Luftwaffe and the destruction or disposal of its equipment and factories. Both tasks are expected to be completed within the next six months. To date, about 486,000 German officers and men have been registered in the British sector and discharged or put to civilian tasks for the Allied military authorities.

The disarming of the Luftwaffe in the British sector is being carried out thoroughly and systematically. Each of the RAF's three operational groups occupies a separate geographical area of the sector, and each is responsible for "cleaning up" its own area. Each group's area is subdivided into wing areas which are further subdivided into squadron and flight areas. The districts are then small enough to be combed thoroughly by what is virtually a house-to-house search. The burgomaster of each town, village, or hamlet is made personally responsible for reporting all arms, ammunition, and war plant in his locality.

Much information has been received from displaced persons, Allied prisoners of war, and the Germans themselves; and the Allied intelligence services have been responsible for the discovery of many hidden dumps and stores. In addition, each unit of the RAF employs reconnaissance parties which conduct searches and investigate reports of hidden equipment and munitions.

The RAF is responsible for the disposal of only Luftwaffe material, but there is the closest co-operation between the three services. During the last stages of the war the Germans widely dispersed production units, stores, and dumps; in some areas there was hardly a barn, dance

hall, or beer house which did not house some war material or plant. There has been some deliberate concealment, some of it so ingenious that mine detectors have had to be used. But this has been largely offset by the remarkable willingness of the Germans to act as informers.

All factories which were engaged in making aircraft, components, aero-engines, and instruments are being stripped and the plant removed. War planes are collected into dumps, valuable instruments and materials removed, and the carcasses are then destroyed, often by running steam-rollers over them. Any novel type of machine or equipment is specially reported to the Royal Aircraft Establishment at Farnborough, the RAF's experimental department, and it is not destroyed until Farnborough has given authority.

The Germans made full use of natural caves, quarries, mines, and other safe places for storing bombs and other explosives. I recently visited a bomb dump near Harth, on the edge of the Hartz mountains, where 15,000 tons of high explosives were stored in vast chambers tunnelled into the side of a hill. The bombs are taken into a clearing in the forest, stacked so that all will explode simultaneously, and detonated. The air-raid sirens are sounded in the neighboring villages and the inhabitants go to their shelters.

The RAF disarmament section has discovered 6,589 dumps of various kinds of weapons and equipment, and factories and workshops which had worked for the Luftwaffe, and reports of a further 511 are being investigated. So far 5,139 have been dealt with. The armament disposal section has destroyed or made harmless over 93,000 tons of explosives ranging from V-weapons to anti-personnel bombs, 84,000 tons of small arms and machine-guns, tens of thousands of rounds of ammunition, and 1,200 tons of miscellaneous equipment. From this total some 32,000 items of equipment have been sent to England for intelligence and experimental purposes. A careful survey of airfields has been carried out, and those not required by BAFO or for air transport purposes are being plowed up and returned to agriculture.

DEMOMOBILIZATION—With demobilization in full swing keynote in the Canadian Army is preparing soldiers for their return to civilian life. At Dundurn camp soldiers waiting discharge have the opportunity to take any number of courses, among them typing and a two-week farm course arranged by the extension department of the University of Saskatchewan. Upper Left—Instructor C. W. Gibbings, Rosetown, shows a class how to

service a tiller-combine. Upper Right—Instructor C. A. Fawell, lectures on the farm tractor. His listeners are, left to right, Pte. W. G. Harrington, Lloydminster; Pte. E. Beglaw, Ernfold; and Pte. M. N. McKenzie, Winters. Lower Left—Cpl. F. G. Zink, Unity, passes on his typing knowledge, learned while in the army, to Pte. M. F. Fishley, Bethune, left and Pte. H. Peters, Swift Current, right. Lower Right—A group get pointers on a binder from Instructor T. W. Moore, Speers.

## LOCAL NEWS

Miss Phyllis Hunt returned from Calgary this week where she underwent an operation.

Harold Greenlee is sporting a '36 Chev sedan these days.

Mrs. K. Pronyshyn and family were week-end visitors at the home of Mr. and Mrs. Shyke.

Chas. Ross' auction sale, three and a half miles east of Swallow, will be held next Thursday, April 18th. Terms cash. N. Boese, auctioneer.

Work on the new Carbon Baptist Church started last week.

Who was Lucy's late caller the other evening?

"Love Thy Neighbor" at the Scout hall tonight.

CARBON SPORTS, MAY 24th

The Carbon Students' Union will hold a dance in the Scout hall on April 12th. Your favorite orchestra will be in attendance and a good time is assured.

This will be the last school dance of the present term. Remember student's dances are tops. This one will be bigger and better than ever.

Get behind the Community Club!

**FOR SUBSCRIPTIONS** to all magazines and newspapers, see your local postmaster.

The Drumheller Male Voice Choir assisted by Guest Artists will present a program in the Scout hall, Carbon, Sunday, April 28th, under the auspices of the Community Club. Tickets may be purchased from any merchant or member of the club. Proceeds are to go to the park fund.

### SMILE AWHILE

Just received a card from a friend who is a war worker. He writes, "Having a wonderful time and a half."

I wish we'd get a few shipwrecked sailors washed ashore. mused the cannibal chief.

What I need is a good dose of salts.

Dear Clara, wrote the young man, Pardon me, but I'm getting so forgetful. I proposed to you last night but really forgot whether you said yes or no.

Dear Will, she replied by return post. So glad to hear from you. I knew that I had said yes to somebody the other night, but I had forgotten who it was.

Your new medicine has helped me wonderfully, wrote the grateful woman. A month ago I could not spank the baby and now I am able to thrash my husband. Heaven bless you.
